Maintenance tips

- 1 For dust and deposits it is sufficient to clean the surface of the skirting with a lightly dampened cloth.
- 2 Commercially available floor cleaning products with water can be utilized, whereby the dosage instruction of the corresponding cleaners must be strictly observed. Overdosing the cleaning agent may cause damage to the flooring and the skirting. No solvents or cleaners with dissolving components as well as alkaline, glycerine and solvent-containing cleaners may be used.
- 3 Cleaning with alcoholic and alcohol-like components such as disinfectants, window cleaners, etc. is not suitable for profiles with printed decorative surfaces. The use of improper products, such as wet wipes, cleaning cloths etc. is not recommended.
- 4 The core skirtings must not be cleaned with abrasives and materials with a rough, hard surface, such as scouring sponges, brushes, microfibre cloths or with scouring pads/brush pads during machine cleaning.

- 6 Only damp-wipe the skirtings, do not clean them using a steam cleaner. Always mop up standing moisture on the floor immediately.
- 7 Foreign substances that are deposited on the skirting board due to the processing of adjacent components, such as wall and floor covering, such as color, seals, primers, etc., can attack and change the surface, especially a printed decorative surface. Appropriate measures for protection against accidental contamination of the assembled profiles must be carried out.

Info from the professional:

With proper care, Döllken core skirtings are extremely robust and durable. The coated wood core offers a protected and easy to clean surface. The strip retains its shape and the decors do not lose their brilliance.
